ESG advises Austria on modernising the Austrian Armed Forces

The consulting arm of the Munich system company supports the Austrian Ministry of Defence in its effort to increase efficiency through structural reform and modernisation of its administrative functions.

Munich, the 16th of February 2007

ESG Elektroniksystem- und Logistik-GmbH is supporting the Austrian Ministry of Defence (BLMV) in its effort to modernise the Austrian Armed Forces. The goal of the consulting services is to improve efficiency in various organisational areas through structural reform and administrative development. The assignment is part of the ÖBH 2010 transformation programme, developed to create a more streamlined, efficient and international army to enable Austria to participate in multi-national military operations for conflict prevention.

ESG and a consortium partner will support the BMLV in evaluating strategic key questions and options for structures and legal forms, and make a significant contribution to the modernisation and sustainability of the Austrian Armed Forces through organisational and process consulting.

With over 1,000 employees, ESG is one of the leading system and software houses in Germany. In addition to complex system development and integration tasks, they have been advising public institutions on modernisation projects for over 40 years. The German Armed Forces have used ESG consulting in the areas of outsourcing and public-private partnership for many years: the company operates a central replacement parts

warehouse for the Germany Army and the supply corps, and is involved in the SASPF project, for example.

The Austrian Ministry of Defence (BLMV) has also been an ESG customer for several years. The Air materials staff commissioned ESG to create the descriptive documentation for Austrian aircraft, among other tasks. Furthermore, ESG is creating hardware-independent and manufacturer-neutral system concepts and architectures to modernise aircraft in Austria, as part of ESG's technical assistance for aviation equipment.
